4 in 1 solution

Schlegel's QLON achieves fire and smoke seal certification

Schlegel are pleased to announce that they have successfully tested the QDS 650 QLON Fire Seal to the exacting standards required by Exova Warrington Fire Research, to achieve the internationally respected Certifire Approval.

To gain this accreditation, the seal has been approved to BS 476, part 22 in two door samples, and has successfully demonstrated a 10% overrun. In addition, the seal has exceeded the requirements for the resistance to the passage of smoke, having tested successfully to BS 476, Part 31-1 both before and after 100,000 cycles.

The QDS 650 QLON Fire Seal now offers timber fire door set manufacturers a single, easy to install product option to meet all their perimeter seal requirements. It provides the weather resistance synonymous with Schlegel products, superb noise reduction properties, and 30 minute fire and smoke resistance.

8 good reasons

At last a ground breaking seal providing a single solution for fire, smoke, weather and acoustic sealing

Easy and quick to install - No need to fit separate smoke/weather and fire seals independently, reducing production time of door frames

Fixes into kerf slot - No reliance on self adhesive strips that can fail over time

Excellent memory - Returns to original shape after compression

Unrivalled stability - Low/no stretch gained by GF internal cord or insert

Outstanding compression - Low compression forces, unaffected by temperature variance (tested to +75°C to -75°C)

Paint and stain proof - Properties unaffected by standard paints and stains

Stabilised - Unaffected by rot, fungi, UV light or ozone

Colour - Wide range of available options (bronze, white, black, greys, etc)

If you are still in any doubt about the benefits of our new QLON fireseal give us a call on 01462 815 500
